Inpatient Data Dictionary for Analysts

BACKGROUND

This data dictionary includes all of the data items that are in the AROC Inpatient V4 dataset. Each data item is listed, along with the definition, justification and guide for use. The language and information is aimed to assist clinically trained staff in using and understanding the AROC data. AROC recommends that this dictionary is used as a support document for staff members collecting data on our <u>data collection forms</u>. If you find that this dictionary does not adequately clarify your query of a data item, please contact <u>aroc@uow.edu.au</u>.

INPATIENT DATA DICTIONARY VERSION

Version	Date	Nature of change
4.1	July 2022	Overall review incorporating updates to Definition, Justification and Guide for use sections to provide clarity and adding more examples. Addition of new data items Did the patient fall during their rehabilitation admission? Total active therapist supervised practice minutes – physiotherapy Total active therapist supervised practice minutes – occupational therapy Total active therapist supervised practice minutes – speech therapy Total active therapist supervised practice minutes – other

Path

Definition:

The three inpatient pathways (models of care) are:

Inpatient direct care (Pathway 3):

- -The patient is under the care of the rehabilitation physician who holds the medical governance.
- -Rehabilitation is delivered in an inpatient setting.
- -The patient is accommodated overnight in the hospital and included in the bed occupancy reporting at midnight.

In-reach (Pathway 2):

- -The patient is under the care of an acute physician who holds the medical governance.
- -The rehabilitation physician or team "reaches into" the acute setting to begin the process of rehabilitation in addition to the acute care the inpatient is already receiving.

Consult/Liaison (Pathway 1):

-The patient is under the care of a physician who holds the medical governance and a rehabilitation physician or team provide a one-off consultation service.

Justification:

Enables assignment of episodes of care to the correct pathway for analysis.

Business Rules:

Definition: Indigenous status is a measure of whether a patient identifies as being of Aboriginal or Torres Strait

Islander origin.

Justification: Australia's Aboriginal and Torres Strait Islander peoples occupy a unique place in respective societies

and cultures. Accurate and consistent statistics about indigenous status are needed in order to plan, promote and deliver services. The purpose of this item is to provide information about people who identify

as being of Aboriginal or Torres Strait Islander origin in Australia.

Business Rules: N/A

Codeset values:

Element ID Short Name Column(s)

E9 StartDelayPatient Z

Definition:

This item collects information about patient behavioural issues that have caused a delay between the patient being assessed as clinically ready for rehabilitation and the rehabilitation program commencing. A delay is only recorded when there is more than 24 hours between being assessed as clinically ready and the rehabilitation program commencing.

Justification:

This item enables identification of the rehabilitation episodes whose rehabilitation start was delayed by patient behavioural issues.

Business Rules:

Only complete if E4=1, "Yes", otherwise leave blank.

Codeset values:

1 Yes

Episode begin date

Pathway:	1 2 3	
Element ID	Short Name	Column(s)

Definition:

The date the patient commenced rehabilitation care. This date defines the beginning of the rehabilitation episode and is the date from which length of stay (LOS) calculation begins. This is not dependent on geography or location of the patient.

The begin date for an inpatient direct episode of care, is the date that the patient's care is transferred to a rehabilitation physician or physician with an interest in rehabilitation and it's recorded in the medical record that the rehabilitation team has commenced the rehabilitation program/ provision of care. It is the date that the "care type" becomes rehabilitation, no matter where the patient is geographically located.

The begin date for an episode of consultation liaison, is the date an inpatient, under another primary care provider (e.g. Acute care,) was seen by a member of the consult team (e.g. Rehabilitation team) and there is documented evidence in the medical record that the patient meets the criteria for rehabilitation.

Justification:

This item is required to establish time periods between critical points throughout the rehabilitation

episode.

Business Rules:

Is this the first direct care rehabilitation episode for this impairment? 3 ✓ Pathway: 1 2 Element ID **Short Name** Column(s) E24 FirstAdm AO This item relates to the patient's impairment and setting, not the particular facility. "Direct care" is when **Definition:** the patient is under the direct care of the rehabilitation physician or team, i.e. they hold medical governance over the patient. The first direct care rehabilitation episode for this impairment considers only those episodes occurring in the inpatient setting regardless of facility. This aims to identify those patients that have repeated rehabilitation admissions/discharges within the inpatient setting as subsequent episodes are typically quite different to primary episodes (NOTE: subsequent episodes caused by adhering to any required jurisdictional business rules will be concatenated into one primary episode as long as they occur within the same facility). Subsequent direct rehabilitation episodes of care are more common in certain impairments such as brain injury, spinal cord injury and/or amputee, where the patient often has multiple rehabilitation episodes across a variety of settings. This item attempts to differentiate the patient's first inpatient direct care rehabilitation episode from Justification: subsequent episodes throughout the patient's rehabilitation journey. It is important to accurately collect data about first direct care rehabilitation episodes as data relating to the first episode of care and subsequent episodes has an impact on outcome benchmarks. **Business Rules:** N/A

Admission FIM Scores

Pathway: 1 ✓ 2 ✓ 3 ✓

Element ID Short Name Column(s) E44-E61 AdmFIM AW-BN

Definition: The patient's Functional Independence Measure (FIM) score for each of the 18 FIM items, assessed at

the time of admission. This item is mandatory for the inpatient data collection.

Justification: The FIM scores and the AROC Impairment codes are based on the Uniform Data System for Medical

Rehabilitation (UDSMR); a minimum data set that includes a system for grouping rehabilitation episodes by impairment type and a rating scale to measure function, the FIM. The FIM is a basic indicator of severity of disability. The functional ability of a patient changes during rehabilitation and the FIM is used to track those changes which are a key outcome measure of rehabilitation episodes. Thus the AROC

inpatient dataset collects FIM scores at episode start and episode end.

Business Rules: Mandatory for pathways 2 and 3

Employment status after, or anticipated employment status after discharge

Pathway:	1 2 3	
Element ID	Short Name	Column(s)
E71	EmpStatPost	BO

Definition:

The patient's employment status, or anticipated employment status, after discharge.

Justification:

Employment is an important outcome that can be measured through the patient's rehabilitation journey. If the patient was employed prior to this impairment, this item identifies if their rehabilitation has enabled them to achieve a level of function that allows them to return to work and at what level or if they have been unable to return to work.

Collection of this data will enable analysis of employment outcome achievement. For example, a patient employed prior to admission and returned to their same or similar job, with reduced hours upon discharge may have different functional outcomes to a patient was employed prior to their admission, but is unable to work upon discharge.

Business Rules:

Only complete if E23=1

Episode end date

Pathway:	1 🗸 2 🗸 3 🗸	
Element ID	Short Name	Column(s)
E113	EndDate	CZ

Definition:

The date that the patient completed their rehabilitation episode. This date defines the end of the rehabilitation episode and is the date at which the length of stay (LOS) concludes.

The inpatient rehabilitation episode ends when the patient is discharged from the rehabilitation unit and/or the care type is changed from rehabilitation to acute or some other form of sub-acute care type (maintenance/palliative care), no matter where the patient is physically located (rehabilitation ward/ acute ward).

The end date for a consultation liaison episode of rehabilitation is when the rehabilitation physician or team has completed the one-off consultation, no matter where the patient is physically located (rehabilitation ward/acute ward). A consultation begin and end date may be the same at times.

Justification:

This item is required to establish time periods between critical points throughout the rehabilitation

episode.

Business Rules:

N/A

Episode end date Page 64

Mode of episode end (Inpatient)

Element ID Short Name Column(s)

E114C EndMode DA

Definition: This item records data about where the patient went to at the end of their inpatient rehabilitation episode.

There are two broad categories reflecting where the patient can go:

1.Back to the community

2.Remain in the hospital system.

Justification: This data item defines how the patient ended their rehabilitation journey. Different exit points are

indicative of a patient's progress in rehabilitation.

Business Rules: If E114=1, complete E116.

If E114=2, complete E115 and if known, E116.

8 Discharged at own risk

9 Other and unspecified

Interim destination (AU)

Pathway:	1 2 3	
Element ID E115A	Short Name AccomInterim	Column(s)

Definition:

This and the next item collect the type of accommodation a patient is going to post discharge from rehabilitation. An interim destination may be defined as accommodation that is only intended to be temporary, which the rehabilitation team considers as a 'middle step' to a final destination.

Justification:

This data item allows the facility to capture the fact the patient is unable to be discharged to what is intended to be their final destination immediately after rehabilitation. Feedback from AROC members indicates that this scenario is quite common and may indicate complexity of the patients discharge, or the lack of equipment and/or services available to the patient.

Business Rules:

Only complete if E114=2. Complete E116 if known.

Total number of leave days

Business Rules:

Total number of suspension days 1 2 3 ✓ Pathway: **Element ID Short Name** Column(s) E131 SusDays DR The sum of the number of days rehabilitation treatment was suspended for a medical reason during an **Definition:** episode of rehabilitation. Where a patient's rehabilitation treatment is suspended for a period, and the patient then comes back onto the same program of rehabilitation (that is, a new program is not required to be developed), then the period of absence is counted as a suspension. It does not matter how long the period of suspension of treatment is, as long as the patient comes back onto the same program of rehabilitation. The suspension period must be a minimum of 1 day (24 hours). Achievement of a patient's rehabilitation goals may be dependent upon the consistency of treatment. Any Justification: requirement to suspend rehabilitation treatment may significantly impact upon treatment outcomes and the efficiency with which these can be achieved. Collection of this data item will provide facilities with information that they can use to help explain their outcomes to interested parties.

Do not leave this item blank. If there were no suspension days, record "0"

Will any services be received post discharge?

Pathway: 1 ☐ 2 ✓ 3 ✓

Element ID Short Name Column(s)

E133 ServicesPostFlag DT

Definition:

This item identifies whether services were necessary post discharge. "Services" refers to paid or unpaid services required post discharge, that is: all services that have been discussed, agreed, planned and booked for the patient prior to discharge. Paid service(s) include both government funded and private health funded services. Unpaid service(s) include care provided by a relative, friend, or partner.

Justification:

Service(s) received relates to the degree of functional independence of the person, and as increased functional independence is a key outcome measure for rehabilitation, it is important to ascertain the person's level of functional independence before and after rehabilitation. Service(s) received before and after rehabilitation can be compared as an indication of any change in the person's functional independence after rehabilitation.

Business Rules:

Only collect if E116=1.

If answer 1,"Yes", collect E134- E142.

Codeset values:

1 Yes

Services received post discharge

2 🗸 3 ✓ Pathway: 1 **Element ID Short Name** Column(s) E134-E142 ServicesPost DU-EC

Definition:

This item collects information about whether services were necessary post discharge. "Services" refers to paid or unpaid services required post discharge, that is: all services that have been discussed, agreed, planned and booked for the patient prior to discharge. Paid service(s) include both government funded and private health funded services. Unpaid service(s) include care provided by a relative, friend, and/or partner of the patient.

The type of service(s) received before and after rehabilitation can be compared as an indication of the Justification:

patient's rehabilitation progress.

Total active therapist supervised practice minutes - physiotherapy

Pathway:	1 2 3	
Element ID	Short Name	Column(s)
E145	Therapist_minutes_p o	physi FC

Definition:

The total number of minutes of active supervised physiotherapy practice during a patient's rehabilitation episode. The practice may be supervised by a physiotherapist or a physiotherapy student or allied health assistant under the direction of a physiotherapist.

Active practice is where patients are engaged physically, cognitively or socially in a task that assists in the achievement of their rehabilitation goals.

Include:

- •Group and class based practice where it meets the above definitions.
- •Semi supervised practice where a patient is set up to practice and regularly monitored.
- •Non pharmacological pain or mood disorder management strategies that meet the above definition.
- Carer training.
- •One to one education that is customised to the patient's rehabilitation goals.

Do not include:

- •Time in therapy environments where patients are waiting for therapist to set/organise therapy.
- •Nursing/carer supervised or independent practice.
- •The arranging of social supports.
- •Generic group based education or the reading of education material

Justification:

The amount of therapy or practice a patient receives during rehabilitation may affect their rehabilitation outcomes. Collection of this item allows for analysis between patients around this and it is also required for collection and calculation of the ACHS Rehabilitation Medicine clinical indicators; Rehabilitation Intensity

Business Rules:

The total number of minutes of active therapist supervised speech therapy practice during the patient's rehabilitation episode. The practice may be supervised by a speech therapist or a speech therapy student or allied health assistant under the direction of a speech therapist.

Active practice is where patients are engaged physically, cognitively or socially in a task that assists in the achievement of their rehabilitation goals.

Include:

- •Group and class based practice where it meets the above definitions.
- •Semi supervised practice where a patient is set up to practice and regularly monitored.
- •Non pharmacological pain or mood disorder management strategies that meet the above definition.
- Carer training.
- •One to one education that is customised to the patient's rehabilitation goals.

Do not include:

- •Time in therapy environments where patients are waiting for therapist to set/organise therapy.
- •Nursing/carer supervised or independent practice.
- •The arranging of social supports.
- •Generic group based education or the reading of education material.

Justification:

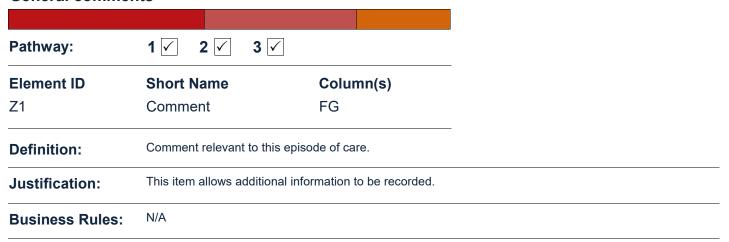

The amount of therapy or practice a patient receives during rehabilitation may affect their rehabilitation outcomes. Collection of this item allows for analysis between patients around this and it is also required for collection and calculation of the ACHS Rehabilitation Medicine clinical indicators; Rehabilitation Intensity

Business Rules:

Total active therapist supervised practice minutes - other 3 ✓ 1 2 Pathway: Element ID **Short Name** Column(s) E148 Therapist minutes other FF The total number of minutes of active therapist supervised practice during the patient's rehabilitation **Definition:** episode that isn't physiotherapy, occupational therapy or speech therapy (e.g. social worker, psychologist, music therapist). The practice may be supervised by an allied heath therapist or an allied health student or allied health assistant under the direction of an allied health therapist. Active practice is where patients are engaged physically, cognitively or socially in a task that assists in the achievement of their rehabilitation goals. •Group and class based practice where it meets the above definitions. •Semi supervised practice where a patient is set up to practice and regularly monitored. •Non pharmacological pain or mood disorder management strategies that meet the above definition. •One to one education that is customised to the patient's rehabilitation goals. Casemix Adjusted Length of Stay (v4)

Pathway:	1 2 3	
Element ID	Short Name	Column(s)
CF114	LOScmix V4	GQ

Definition:

'Casemix adjusted Length of Stay v4' allows facilities to directly compare their 'Length of Stay' outcomes against those of their benchmark group. It uses the AN-SNAP v4 class to adjust the data, which in effect takes into account the unique characteristics of the facility, such as mix in impairments, age of patients and start FIM values.

For a given time period;

Casemix adjusted LOS = (the LOS of the episode) MINUS (the average LOS of all episodes in the same AN-SNAP v4 class).

Adjustments are based on the time period of the most recently published benchmarking reports.

A positive value for 'Casemix adjusted Length of stay v4' indicates that the episode has performed more poorly than the benchmark average. A negative value indicates that it has performed better than average.

This is a derived data item which is determined by actual length of stay and expected length of stay (as determined by AN-SNAP class V4).

Justification:

It is not correct to compare length of stay between facilities without taking into consideration variation in casemix.

Business Rules:

The 'Casemix adjusted Length of Stay v4' calculation requires a valid LOS and AN-SNAP v4 class and is only calculated for episodes of rehabiliation that have been completed. If either of these values is missing, or the episode was not completed (incomplete), "N/A" will be recorded.

Completed Episode of Care

Pathway:	1 2 3 7
Element ID	Short Name Column(s)
CF205	CompletedEpisode HC
Definition:	An episode is considered "complete" if:
	A) The patient was discharged to usual accommodation (or accommodation that is to become their "usual" accommodation) or discharged to interim accommodation AND their total FIM score at the end of their rehabilitation episode was greater than 18.
	OR
	B) The patient's care type was changed within sub-acute/non-acute care AND they had a length of stay greater than 6 days.
	If analysing any outcome data use only those episodes where this flag is 1=Yes (Complete episode).
Justification:	Not all inpatient rehabiliation episodes are complete, and to include incomplete episodes in calculations of LOS or FIM change would not provide an accurately report on what an inpatient rehabiliation episode looks like. Partial episodes typically have shorter LOS and lower FIM change scores and may end in a transfer back to acute care. To ensure the summarised data is based on completed rehabiliation episodes this flag was created.
Rusiness Rules	For the 'Complete Episode of Care' flag to be calculated, valid 'Episode End Date', 'Mode of episode en

Business Rules:

For the 'Complete Episode of Care' flag to be calculated, valid 'Episode End Date', 'Mode of episode end' and FIM data items must be provided. If 'Mode of episode end' is 7 (patient's care type changed within sub-acute/non-acute care), then episode begin date is also required. An episode is considered "complete" if A) Mode of episode end =1(discharged to usual accommodation) or 2 (discharged to interim accommodation) AND total FIM score at episode end was greater than 18 or B) Mode of episode end was 7 (change of care type within sub-acute/non-acute care) AND LOS greater than 6 days. Complete episodes are coded 1. If any of these values are missing from the episode, or the episode is incomplete it will be coded 0.
